(2022-23)

# OUR GUIDES

**Ms. Nidhi Pandey, IIS Commissioner**

**Sh. S. S. Chauhan, Deputy Commissioner**

# Principal’s Message

Mrs. Bimla Verma
PGT HINDI

I am very fortunate to work with dedicated, innovative and caring students. I find each day an adventure filled with new experiences, learning for all and a chance to constantly widen our horizons. It always gives me a great pleasure to see the sea of smiling faces of children and I must admit that it is the students who make my day brighter and adventurous with full of enthusiasm.

It’s challenging to go a few days without having heard about a significant data breach that could expose the personal information from millions of customers to criminals. As a result, there seems to be an enhanced urgency to showcase and mentor our students to a deeper understanding of safeguarding cyber information.

My heartiest best wishes to all students for their bright future!!

Regards,
Mrs. Bimla Verma
Principal I/c

## From the Desk of HOD

Cybersecurity awareness involves being mindful of cybersecurity in day-to-day situations. Being aware of the dangers of browsing the web, checking email and interacting online are all components of cybersecurity awareness.
No matter at home or school, cyber security tips have a significant role in a student's life. As the present situation has demanded students to move into a digital learning space, they are spending a considerable time online every day. Even when teachers and parents are trying it hard to assure maximum safety in today's virtual learning space, still there are loopholes that might land them into trouble. So, it is now the extra responsibility of parents and teachers to have an eye on the kids and protect them from the unwelcomed incidents through fruitful tips and advices. Throughout the year we helped the students by discussing some of the crucial areas that students need to have a look at and important cyber security tips to assure a safe online learning experience.

## Computer Instructor's Message

Cyber Security is the practice of securing our digital data from any online fraud or digital attack. Our School curriculum and practices are consistently reviewing to ensure that students can follow the most up to date and best practices for meeting the needs of Securing there privacy while surfing online. In the present era where the technology is on the blossom level and everything is surrounded by advanced gadgets like smart phones, computers, laptops, internet connectivity etc. awareness of students regarding cyber security is our prime need of the hour.

**Mr. Aadi Sharma**
**C.I**

# Cyber Crime and Cyber Security

Cybercrime is an offensive and unethical attempt that occurs on or through a computer, the internet, or another piece of technology that has been approved by the Information Technology Act. The most pervasive crime that has a severe impact on contemporary India is cybercrime. Numerous unlawful actions are carried out by technically proficient criminals on the internet. If we apply a broader definition, we can say that cybercrime is any illicit conduct that uses a computer or the internet as a tool, a target, or both.

The term "cyber security" refers to a set of technologies, processes, and practices that are designed to protect networks, devices, programs and data from digital attack, damage, or unauthorized access. Cybersecurity basically is divided into two words: cyber, which means “ Any Data directly or indirectly related to computers," and security, which means "protecting various types of Data from being misused." Terminologies such as computer security or IT security are aliases for Cybersecurity fundamentals.

# CYBER SECURITY AWARENESS

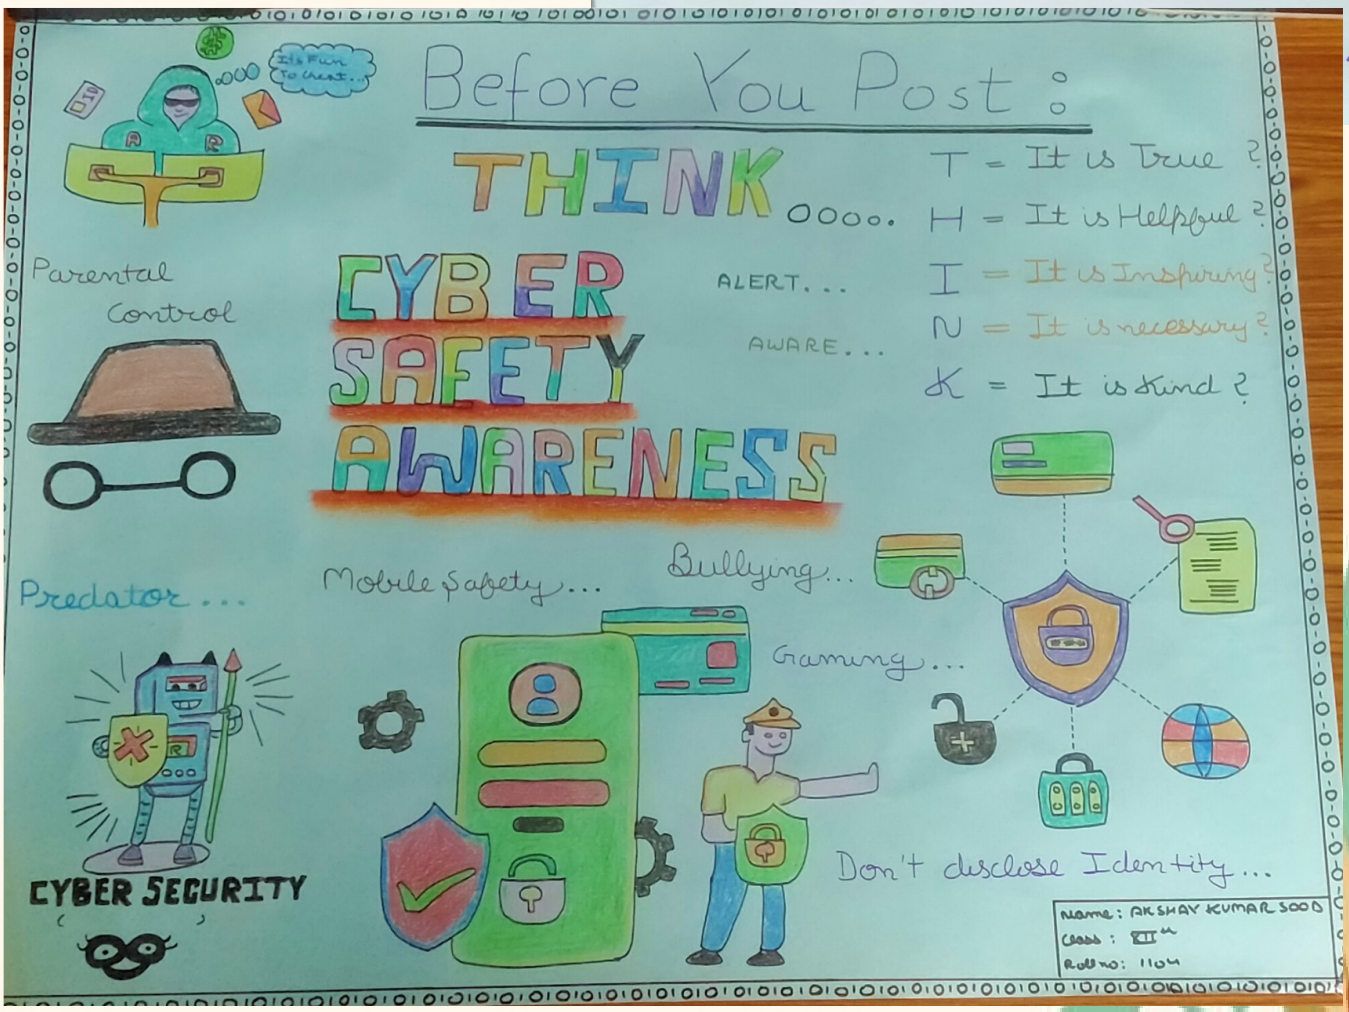
Cyber Security Awareness refers to how much end users know about the cyber security threats their network face, the risks they introduce and mitigating security best practise to guide their behaviour. End users are considered the weakest link and primary valnerability within a network. Since end users are a major valnerability, technical means to improve security are not enough. Organizations could also seek to reduce the risk of the human element. This could be accomplished by providing security best practice guidance for end users' awareness of cyber security.

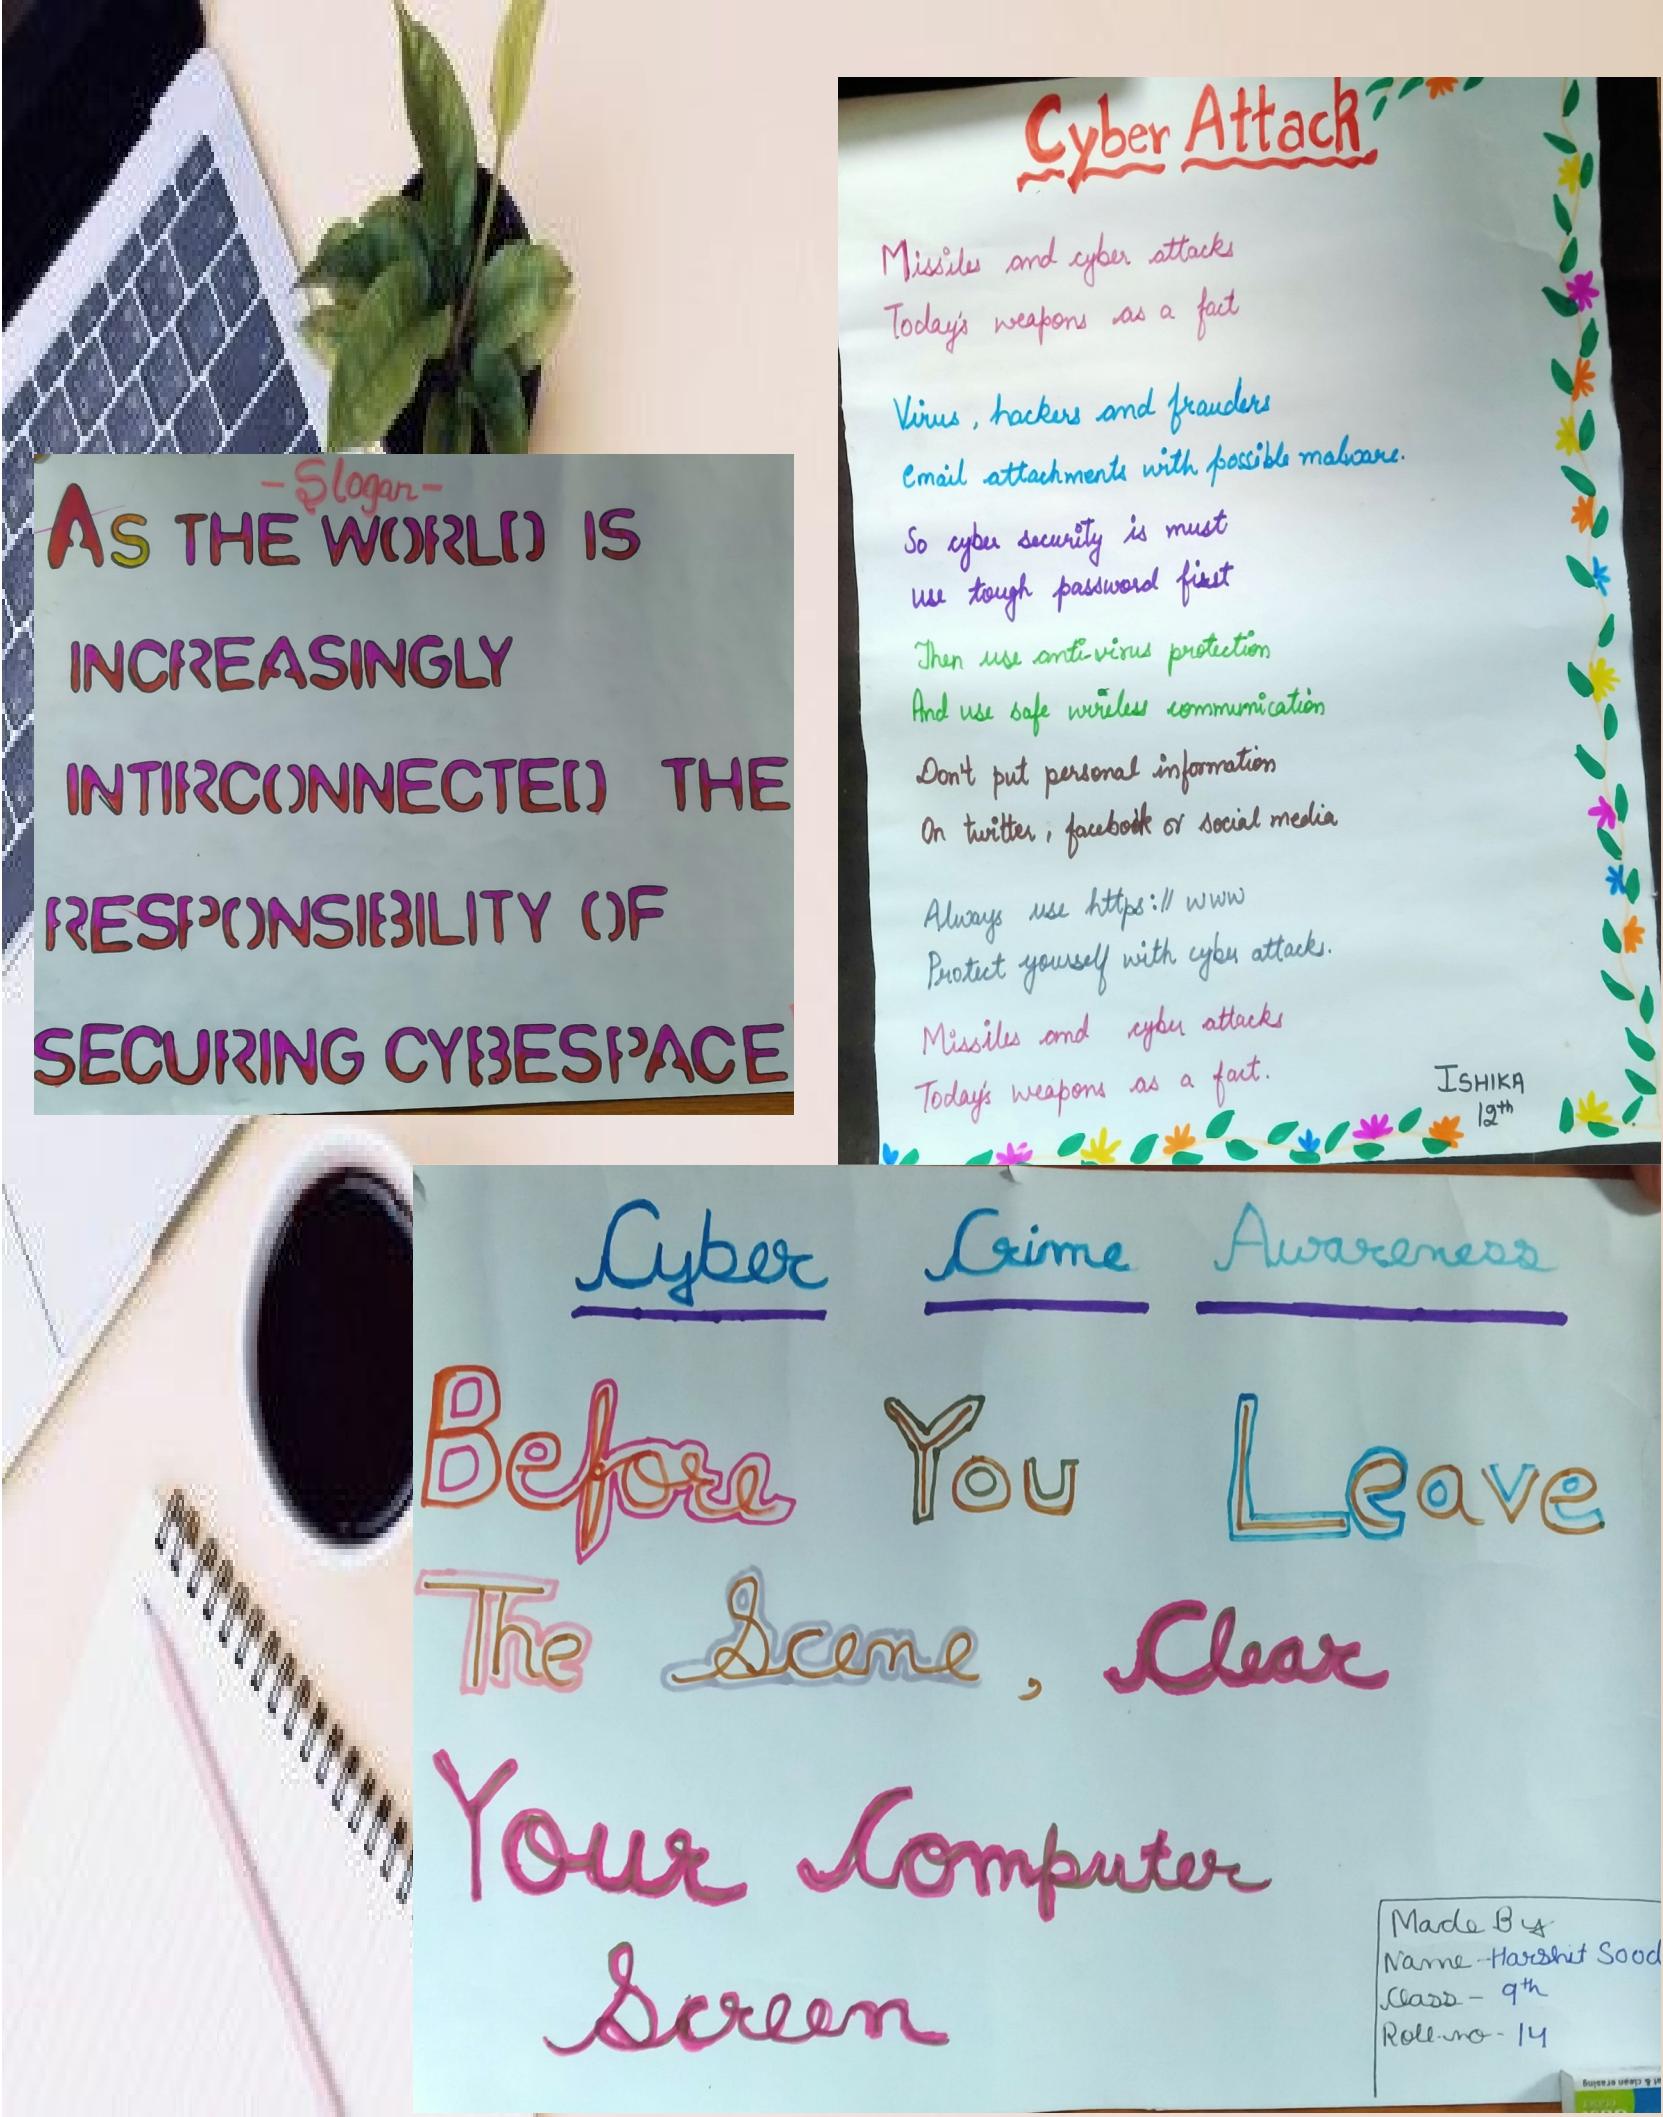
There always a many methods to protect yourself from cyber crime like protect your password > Verify requests for private information, Think twice before clicking on links or operating attachments and Protect your stuff.

Deepika 12th



# CYBER SECURITY

The protection of networks, data, programs and other sensitive information from unauthorized access, alteration and destruction is known as cyber security. Cyber security is a major concern in this era where the use of computers has become common for all. With the development of technology and the availability of the internet for most of the public, the path of cyber crimes has also increased. Malware, spyware, ransomware, fraud, phishing etc are used in cyber attacks. Hackers gain easy access to someone's computer system if the user of that computer clicks on infected web pages, links, malicious websites, or inadvertently downloads a dangerous program. Cyber security plays a vital role in preventing some difficult and heinous crimes like black-mailing, fraudulent transactions through second accounts, leakage of personal information. It is the responsibility of every citizen to spread awareness among all and keep their system and network security updated to prevent cyber attacks from happening around the world.



-Slogan-
AS THE WORLD IS INCREASINGLY INTIRCONNECTED THE RESPONSIBILITY OF SECURING CYBESPACE
Cyber Attack
Missiles and cyber attacks
Today's weapons as a fact
Virus, hackers and frauders
email attachments with possible malware.
So cyber security is must
use tough password first
Then use anti-virus protection
And use safe wireless communication
Don't put personal information
On twitter, facebook or social media
Always use https:// www
Protect yourself with cyber attacks.

# CYBER SECURITY AWARENESS

## STORY → TITLE: MY BEST FRIEND

Rami lives in an apartment in a small town of Dhruwa in Goa. She lives with her father and mother, her father is a factory labour and her mother is a beautician. Her parents always wanted her to learn computer so that she can fix their poverty issues. So they got one for her. And Now, her computer was her best friend as well as it is to maintain daily-schedule and for school purposes.

One day she installed a social media application named 'LINE'. She was pretty much excited to make new friends. Then she joined a group and started chatting with her friends. Everyday she use to chat for at least 2 hours after she come back from school. One day she received a friend request from a girl named Rami. Her profile photo was really beautiful. Nami accepted her request. Then they started chatting. "Do you have many friends"? Rami asked. "No I am new here"; Nami replied. "Then I will try my best to become your bestie", Rami said. This made Nami really happy.

From that day, both use to talk for hours a day. One day Rami asked Nami for her real picture. Nami hesitated but sent her one. After that Rami replied "You are also pretty, do you want to come for summer tomorrow?". Nami again hesitated but accepted her proposal. That night Nami couldn't sleep because of the thought that what if Rami is a fraud?. Next day she told everything to her mother and both decided to go together.

Nami reached the rendezvous point and waited for Rami. Some moments later an old guy came and hold her hand. "Who are you". "I am Rami"; "sorry but I was a old man, and I didn't tell you that. But I love to be friends with younger girls"; says the uncle. "Leave me", she cried out and suddenly her mother came, and hit him with her handbag. Then the old man cried and ran away.

## STORY → TITLE: PERFECT STRANGER

Once there was a man named Sahil, he lived in the pink city of Rajasthan. He was a kind and humble man. He was very polite and easy to read. He worked as an employee in IMU department of Applied Science. One day he received a phone call from a unknown number. He thought not it must be a relative, so he accepted it. A women with sweet voice spoke "Hi sir, I am Rashmi, and I am speaking to you from XYZ lottery draw. I want to tell you that you have won ₹2000000 and a car in our lucky draw".

Sahil jumped of joy. After hearing this he couldn't believe his ears and in excitement he offered an appointment to the lady. After that he went home rapidly and decided not to tell his family members about his success he wanted to surprise them. Next day he came to a restaurant for the appointment. She asked him to pay ₹5000 for processing fees. Sahil paid every thing without looking at the terms and conditions. Next day when he woke up, he saw a pop up notification saying "Your current bank balance is ₹0.00".

After seeing this his heart came into his mouth. He started to worry and wept a lot. His parent asked him that what happened to you all of a sudden? He replied "All my money and saving are gone, what would I do?". After that he narrated the full story to his parents. Soon after that they went to the Cybersecurity and Information Security Agency (CISA) and reported a F.I.R. His parents convinced him not to worry, every thing will be alright. A few days later all the money was deposited to his bank account and the culprits were caught. The cyber cell officers thanked Sahil for helping them to catch these criminals.

MORAL: NEVER SHARE YOUR PERSONAL DETAILS WITH STRANGERS

# Essay on "Cyber Security"

Cyber security refers to the protection of data, networks, programs as well as other information from unauthorised access which might cause a great distruction to the data. It is of great importance nowadays as cyber crimes are increasing in abudance. Cyber crimes refer to various criminal activities done by involving cellphone, computer or other technical devices. With the increase in technology, nowadays by using only a few codes, the attackers may exploit a lot of sensitive data. Hacking is an ordinary way of penetrating the defence of protected systems and disrupting their functioning. As the world has moved extensively to online mode, thus, data protection is needed immensely.

Cyber security is one of the world's biggest needs due to today's high internet penetration as cyber security threats are very dangerous to a country's security. The government as well as the citizens must spread awareness among the people to update their security settings and install anti viruses. Various methods could be adopted to protect data like enabling two step authentication as an extra security layer. Even, being careful while surfing the internet would help a lot. One must monitor the system regularly by updating and checking security settings and allowing malware preventions to be safe from intrusive cyber attacks. Intrinsically, Cyber security isn't easy but it comes down to three basic principles - Protect, detect and respond. Thus, being a responsible citizen, we must protect ourselves from cyber attacks and should also aware others to ensure cyber security.
